

Changelog — Since 472b0a6082238d1c6aeb2d4113ece7fd43fe5447

1) Model File Replacement and Experiment Integration

- Replaced `NetLogo-Project-Group5/Group5_Misconduct_ABM.nlogox` with the new `Group5_Misconduct_ABM_EXPERIMENTS_V1` version shared by teammates.
- Integrated built-in BehaviorSpace experiment suites directly in the `.nlogox` model:
 - `exp1_policy_grid`
 - `exp2_stakeholder_pareto`
 - `exp3a_sens_employees`
 - `exp3b_sens_init_propensity`
 - `exp3c_sens_init_fear`
 - `exp3d_sens_response_strength`
 - `exp3e_sens_drift_speed`

2) Model Logic and Parameters (Current Integrated Version)

- Reporting input was simplified to:
 - $0.1 + 0.8 * \text{reporter-protection} - \text{fear}$
- Logistic steepness was updated to:
 - $\text{logistic}(x) = 1 / (1 + \exp(-5 * x))$
- Existing sanction/retaliation bystander effects remain part of the model:
 - punishment bystanders in radius 6
 - retaliation bystanders in radius 3

3) Analysis Pipeline Added to Repository

- Added experiment analysis script:
 - `NetLogo-Project-Group5/Experiments/analyze_all_experiments.py`
- Added sample output figures:
 - `NetLogo-Project-Group5/Experiments/Sample Output Plots/exp1_heatmaps.png`
 - `NetLogo-Project-Group5/Experiments/Sample Output Plots/exp1_mechanism.png`
 - `NetLogo-Project-Group5/Experiments/Sample Output Plots/exp2_dynamics.png`
 - `NetLogo-Project-Group5/Experiments/Sample Output Plots/exp2_pareto.png`
 - `NetLogo-Project-Group5/Experiments/Sample Output Plots/exp3_sensitivity.png`

4) Documentation Synchronization

Updated the following manual documentation files to reflect the integrated model and experiment workflow:

- `NetLogo-Project-Group5/Interface.md`
- `NetLogo-Project-Group5/Variable_Slider_Tick_Math.md`

- `NetLogo-Project-Group5/Documentation.md`
- `NetLogo-Project-Group5/Code.nls` (synchronized with embedded model code)
